

FOR IMMEDIATE RELEASE

Stability Health Closes on \$7.5 Million in Funding Expanding Its Ability to Transform the Delivery of Diabetes Care

Marlborough, MA. *August 17, 2022* - Stability Health, a company that is transforming the delivery of diabetes care through digital innovation, announced that it has now raised a total of \$10 million in seed funding. A final close of \$7.5 million second-round funding was held July 29, 2022.

Multiple investors support Stability Health's unique, tech-enabled care model that first made news in 2019, when it introduced a revolutionary new way of managing diabetes care. Its delivery platform supports healthcare systems and their clinicians to deliver advanced diabetes care to those struggling with the disease.

Stability Health will use this latest investment to expand upon its strength of bringing clinical expertise, technology and humanity into the delivery of diabetes care, facilitating greater outcomes on a national level.

According to Nick Loporcaro, the former CEO of Landmark Health and an investor in this financing, it's the senior leadership team and technology platform that sets Stability Health apart. He said, "What attracted me is how the team has incorporated their deep knowledge of diabetes and successful clinical experience into a technology platform that solves the challenges of complex diabetes."

Stability Health's Clinical Leadership Team

Investors and clients recognize the strength and depth of Stability Health's leadership team, including key players:

Alicia Warnock, MD and Chief Operating Officer

Dr. Warnock is a board-certified endocrinologist who served 12 years as physician and Lt. Commander in the U.S. Navy. She led the design and implementation of the Navy's Patient Center Medical Homes, the first to receive NCQA accreditation. While at the Walter Reed National Military Medical Center in Bethesda, Maryland, she served as director of the Diabetes Institute and held key leadership roles in the Military Health System. She is devoted to an interdisciplinary approach to care, believing that the future of improved care delivery comes from a team-based approach.

Peggy Chou, MD, MBA Chief Medical Officer

Dr. Chou is a board-certified internist with extensive experience in healthcare operations and strategic management. As Sr. Medical Director of Medical Management and co-leader of ACO Performance Management at Atrius Health, she led teams to improve performance of value-based contracts with best-in-class results. As Director of Primary Care Services at Boston Medical Center/Boston University School of Medicine she ensured primary care practices at the center achieved organizational goals. Recently, she was named a Rock Health Summit Innovation Fellow.

Dave Harlan, MD Chief Scientific Officer & Co-Founder

Dr. Harlan is a board certified endocrinologist with 39 years of experience caring for those with diabetes. He received his medical training at Duke University and spent 30 years in the US Navy, and the US Public Health Service, attaining the rank of Captain in both. While assigned to the National Institutes of Health, Dr. Harlan was recognized internationally for his work in transplantation-based therapies for diabetes. He is currently Co-Director of the Diabetes Center of Excellence at the University of Massachusetts Medical School and director of the Juvenile Diabetes Research Foundation Center of Excellence in New England.

Stability Health’s Transformative Care Model

Stability Health’s diabetes operating system is a technology-based solution that leverages data analytics to monitor and automate care processes. Patients have a dedicated, human coach to help them virtually along their journey, while the system delivers unparalleled clinical expertise, and medical advice to primary care clinicians, obstetricians, and other associated clinicians. This facilitates the delivery of strong clinical outcomes and high patient and clinician satisfaction. It also results in financial benefits for clients, as well as increased efficiency and productivity of the clinical staff.

Its care model is flexible and adaptable to client needs. Clients range from a *US News and World Report* top 15 academic medical center in the Northeast; a multi-specialty group serving a diverse urban population with many non-English speakers; to a large, clinically-integrated network serving a rural population. Locally, Stability Health works with Signature Medical Group of Brockton, MA.

Stability Health is accredited by the Association of Diabetes Care and Education Specialists (ADCES) and was named one of 2021’s Best Tech Startups by *The Tech Tribune*.
